Total courtroom efficiency

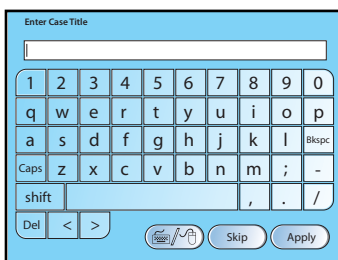

RecordIAB v2

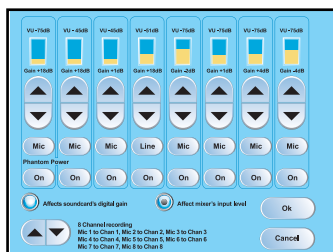

RecordIAB: Audio capture and management in an enclosed console

Recording Screen

Virtual Keyboard

Audio input levels

RecordIAB is an innovative, 8-channel recording console that lets you record, playback, transcribe and store digital audio. With simple tape recorder style controls and an easy to use touchscreen, RecordIAB puts digital audio recording at your fingertips. RecordIAB comes with over 10,000 channel hours of internal storage capacity and a built-in CD/DVD burner for easy external storage and backup. A complete standalone system, RecordIAB is a fast, easy and cost-effective way to make the move to a digital recording system.

RecordIAB version 2.0 comes with the following new and enhanced features:

- Configurable automatic case number settings
- Ability to archive audio while recording
- Enhanced searching, including unarchived cases and records of deleted cases
- Button configuration option that lets you hide buttons you don't use
- Keyboard hotkeys for faster workflow
- Administrative exit to Windows option
- Built-in support for NetScribe transcription utility
- Enhanced web administration, including audit history

CourtFLOW Suite

CourtFLOW: Enterprise-level audio capture and management

Our flagship, enterprise-level digital audio solution for courthouses, CourtFLOW provides effortless digital recording, remote video monitoring, instantaneous retrieval and playback of any case audio, plus secure storage. CourtFLOW can provide simultaneous digital recording of all of your courtrooms and can be managed from one central location or from individual courtrooms.

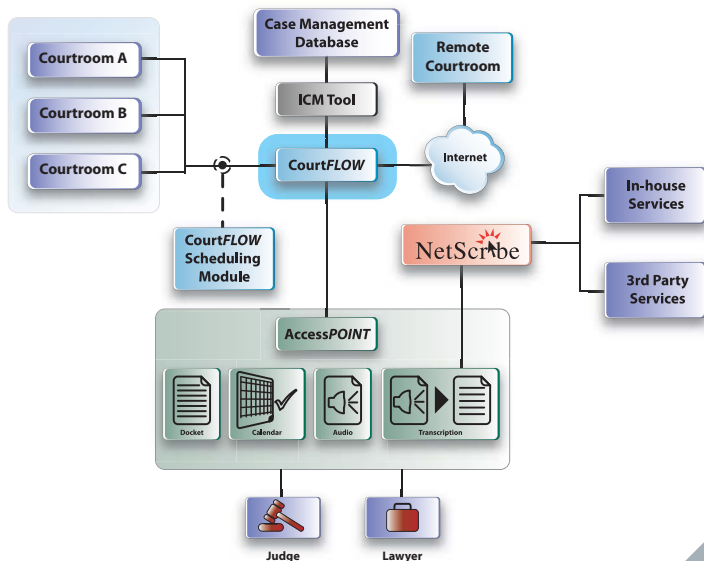

CourtABLE: Standalone audio capture and management

CourtABLE provides a complete digital audio capture application ideal for court reporters and circuit judges in standalone situations or moving between different courtrooms. CourtABLE provides digital recording, text and video annotation, playback, and workflow management, all from a laptop or desktop computer. CourtABLE is compatible with VIQ's enterprise-level CourtFLOW system, and allows you to send audio via LAN or Internet for storage or transcription.

RecordABLE: Audio capture and management for hearings

Designed especially for meetings and hearings, RecordABLE comes in two different options: RecordABLE Standalone for individual portable use or the RecordABLE Networked solution for multiple fixed locations. RecordABLE provides complete digital audio recording, playback, storage, and management in a compact, easy to use solution. With RecordABLE, you get a convenient digital record that can be easily transferred to a server or CD, or uploaded to the NetScribe server for transcription.

ICM Tool: Complete Case Management integration

The ICM (Interface to Case Management) Tool instantly transfers data from your Case Management system into your CourtFLOW system for integrated digital recording. There's no need to re-enter case information when you begin recording. The ICM Tool is compatible with leading Case Management systems, including CM/ECF.

Scheduling Module: Remote recording control

With the CourtFLOW Scheduling Module, one person can schedule and control recording in all the courtrooms on the CourtFLOW system. Securely accessed over the network or the Internet, a single administrator can log in and manually start and stop recording in any connected courtroom. Or, if your courtrooms follow a consistent schedule, the administrator can create one-time or recurring events, and let the CourtFLOW Scheduling Module handle the recording process automatically.

AccessPOINT Portal: Secure, online access to case audio

The AccessPOINT Portal provides judges, lawyers, and other authorized parties with secure, password-protected access to court recordings, annotations, and transcription services from their office, home computer, or any computer with an Internet connection. The AccessPOINT Portal is available 24 hours a day and every transaction is securely protected.

NetScribe: Transcription and workflow management

NetScribe works with VIQ's recording solutions to provide a complete audio capture-to-transcription workflow solution. NetScribe acts as a reliable, secure workflow utility, giving transcriptionists instant access to your recorded audio and allowing you to retrieve the completed transcript with just a few clicks of the mouse.

VIQ Solutions

VIQ Solutions offers a complete digital solution that improves operational efficiency and streamlines courtroom workflow. We offer a range of integrated services, all from one secure, central database: digital audio recording, text and video annotation, voice-to-text transcription, remote video monitoring and recording control, Case Management integration, and interactive electronic scheduling. VIQ's versatile applications work together to make your workflow more efficient.
